

How much does hot-dip galvanized mesh cable tray cost

AI Overview

Custom-made hot-dip galvanized mesh cable trays typically range from \$20 to \$150 per meter, depending on size, material thickness, and load capacity.

Pricing Overview

The cost of hot-dip galvanized mesh cable trays varies based on several factors, including tray width, depth, side rail height, wire diameter, and overall length. Standard sizes often start at 25mm depth and 50mm width, while larger trays can reach 200mm depth and 1000mm width, with lengths from 2 to 6 meters per section. Customization, such as specific side rail heights (25–200mm) or reinforced wire mesh for higher load capacity, can increase the price.

Material and Coating

Hot-dip galvanization provides a thick zinc coating that enhances corrosion resistance, making these trays suitable for indoor and outdoor industrial environments. The steel quality, zinc layer thickness, and compliance with standards like BS EN 10346:2009 or ISO 9001 certification can influence pricing.

Supplier and Market Factors

China remains the largest producer, offering competitive pricing, while emerging hubs like Vietnam and India provide cost advantages without compromising quality. Prices are also affected by raw steel and zinc market fluctuations, shipping costs, and minimum order quantities (MOQs). B2B platforms often allow real-time price comparison and negotiation for custom orders.

Typical Price Ranges

- Small trays (25–50mm depth, 50–100mm width): \$20–\$40 per meter
- Medium trays (75–100mm depth, 150–300mm width): \$50–\$90 per meter
- Large trays (150–200mm depth, 500–1000mm width): \$100–\$150 per meter

Custom features such as double hanging installation, reinforced mesh, or special lengths may increase the cost further.

Recommendations

For accurate pricing, it is advisable to contact suppliers directly with your specifications, including dimensions, load requirements, and installation t...
