

How to install the 7-shaped cable tray buckle

AI Overview

A 7-shaped cable tray buckle is installed by positioning it over the tray cover or fitting, engaging the buckle's hook into the tray edge, and tightening it to secure the cover in place.

Step-by-Step Installation

Prepare the Cable Tray and Cover Ensure the cable tray is properly mounted and aligned according to your site plan, with supports spaced appropriately (typically 1.5–3 meters apart depending on load). If the tray is cut to size, deburr edges and wear protective gloves and glasses to prevent injury.

Position the 7-Shaped Buckle Place the 7-shaped buckle over the edge of the tray cover or fitting. The hook portion of the buckle should engage the tray lip or pre-drilled perforation if present. For covers with pre-mounted turn buckles, ensure the buckle aligns with the tray support points. Some covers may have one or two pre-mounted buckles depending on the fitting type (e.g., T-piece, add-on tee).

Secure the Buckle Press the buckle firmly so that it grips the tray edge. If the buckle has a screw or clamp mechanism, tighten it according to the manufacturer's torque specifications to ensure a secure fit. Check that the cover is held firmly by the buckle and that there is no movement along the tray.

Verify Alignment and Safety Ensure the cover is level and properly seated on the tray. Misalignment can cause gaps or stress on the tray system. Confirm that all buckles along the tray run are installed consistently to maintain structural integrity and safety.

Final Inspection Inspect all installed buckles to ensure they are fully engaged and tightened. Verify that the installation complies with local electrical codes and standards, such as BS EN 61537 for cable tray systems.

Tips and Best Practices Always use buckles and covers designed for the specific tray system to ensure compatibility and safety. Avoid over-tightening, which can deform the tray or buckle. For long runs, consider installing covers in sections and using mul...
