

Insufficient PoE voltage on the switch

Overview

Check PoE Budget: Ensure the PoE switch or injector has enough power budget to support all connected devices. Verify Cable Quality: Use Cat5e or higher cables for reliable power. This guide provides a step-by-step troubleshooting framework focusing on Cisco Catalyst switches (notably the 9300 and 2960 series), covering error categories, CLI commands, model-specific insights, and preventive measures. By following these methods - and using the downloadable PoE Troubleshooting. This document describes how to troubleshoot Power over Ethernet (PoE) on Catalyst 9000 PoE-capable switching platforms. Cisco recommends that you have knowledge of these topics: • Catalyst 9000 Series switches • Power over Ethernet This document is not restricted to specific software and hardware. When a problem occurs with PoE, in most cases, the error symptom can be simply shown as the PoE switch not providing power, and the powered devices will stop working. The cause of failure may be attributed to many factors, including hardware device factors and software factors., IP cameras, phones, or access points) malfunctioning or failing to power on.
