

Ofnp grade optical cable

Overview

OFNP (Optical Fiber Non-conductive Plenum) is the highest flame retardant grade of fiber optic cable. When a fan is used on the fiber optic cable to force the flame to blow, the fiber cable will extinguish itself within 5 meters of the flame spread. OFN is the designation given by the National Fire Protection Association (NFPA) to interior fiber optic cables that contain no electrically conductive components and are not certified for use in Plenum or Riser applications. OFC stands for. Compare wire vs. Send data between data centers and workstations in fiber-optic networks. Each material has its characteristics (such as different fire performances) and its scenarios. Common outer jacket materials are divided into PVC, riser, Plenum, LSZH, etc. Therefore, LSZH is only a material property and. OFNP Brochure There are four levels of fire resistance for fiber cables and each level has two divisions which are the conductive and non-conductive cables.
