

Surface-mounted wiring box distribution box

AI Overview

Surface-mounted distribution boxes provide safe, accessible, and versatile enclosures for electrical wiring and circuit connections, suitable for both indoor and outdoor applications. Overview and Function Surface-mounted distribution boxes are essential components in electrical installations, designed to protect wire and cable connections, facilitate branching of circuits, and allow easy maintenance of electrical systems. They are mounted directly on walls or other surfaces, eliminating the need for embedding into structures, which makes them ideal for retrofitting or remodeling projects. These boxes ensure long-term reliability and safety by insulating connections from mechanical damage, dust, moisture, and temperature fluctuations.

Types and Materials

- Sealed Boxes:** Offer protection against moisture, dust, and temperature changes, making them suitable for outdoor areas, damp rooms, basements, garages, and gardens.
- Unsealed Boxes:** Cost-effective and convenient for dry indoor environments such as offices, living rooms, or storage areas.

Materials: Commonly made from polycarbonate (PC), ABS, technopolymer, fiberglass-reinforced polyester, or metal, providing flame retardancy, corrosion resistance, and durability.

Features and Customization

- IP Protection:** Sealed boxes can achieve IP65 or higher, ensuring dustproof and waterproof performance.
- Doors:** Options include transparent or opaque doors, sometimes with safety locks, allowing quick visual inspection of components without opening the box.
- Mounting and Installation:** Surface-mounted boxes come with pre-drilled holes, mounting rails, and terminals, enabling fast and straightforward installation.
- Accessories:** Optional features include double-row or screwless terminal strips, cable glands, and pre-assembled modules for automation or EMC-critical applications.

Applications

- Residential:** Wiring in apartments, houses,...
