

The function of the conduit in the distribution box is

Overview

Used in industrial, commercial, and residential applications, the conduit is simply the tubing—typically metal or plastic—used for electrical conductors, or electrical wires, to pass through. It provides protection to the conductor or wire, and to anyone who might come in close. The firestop is made of firestop mortar on top and mineral wool on the bottom. Raceways are used to protect electrical cables from damage. Conduit embedded in concrete structure for distribution of electrical cables throughout this highrise apartment building Electrical conduit and bus duct in a. A conduit box, often referred to as a junction box or conduit body, is a protective enclosure used within an electrical wiring system. Inside, the power is split into multiple, smaller circuits that run to different areas—like the kitchen, bedrooms, lighting, and air conditioning. The answer is simple: it's conduit.
